

Safety directional valves with spool position monitoring

On-off, pilot operated, conforming to Machine Directive 2006/42/EC - certified by

Pilot operated safety directional valves with main spool position monitoring, **CE** marked and certified by **TÜV** in accordance with safety requirements of Machine Directive 2006/42/EC

Two models are available depending to the pilot valve execution:

DPHI for AC and DC supply, solenoid pilot valve (5) type DHI, with cURus certified solenoids, see tech. table E010 DPHE high performances, for AC and DC supply, solenoid pilot valve (5) type DHE with cURus certified solenoids, see tech. table E015

The valves are equipped with FV inductive position switch for the main spool position monitoring, see section 9 for sensor's technical characteristics.

Certification

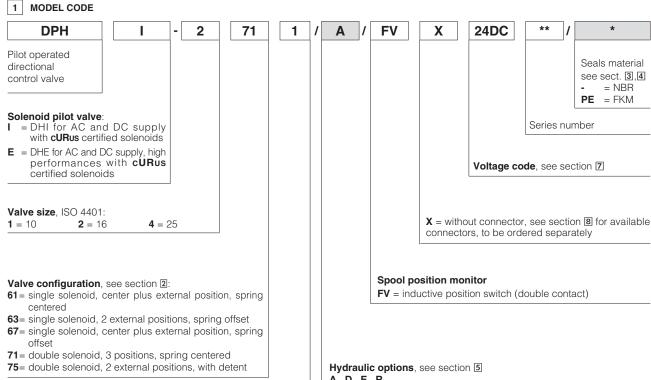

The TÜV certificate can be downloaded from www.atos.com, catalog on line, technical information section

Mounting surface: ISO 4401, size 10, 16, 25 Max flow: 160, 300, 700 I/min Max pressure: 350 bar

FV = inductive position switch providing both NO and NC contacts to be wired on the electric connector

The FV inductive position switch is directly connected to the valve main spool

In pilot operated valves only the main spool position is monitored; the pilot solenoid valve is not monitored

2 CONFIGURATIONS and SPOOLS (representation according to ISO 1219-1)

2.1 Standard spools availability

- DPH*-1 are available only with spools **0**, **0/2**, **1**, **1/2**, **3**, **4**, **5**, **58**, **6**, **7** DPH*-2 and DPH*-4 are available with all spools shown in the above table

2.2 Special shaped spools

- spools type 0 and 3 are also available as 0/1 and 3/1 with restricted oil passages in central position, from user ports to tank.
- spools type 1, 4, 5, 58, 6 and 7 are also available as 1/1, 4/8, 5/1, 58/1, 6/1 and 7/1 that are properly shaped to reduce water-hammer shocks during the switching.

2.3 Special spool availability

5 HYDRAULIC OPTIONS

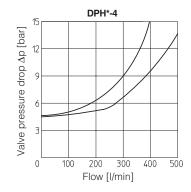

- 5.1 option /A = Solenoid mounted at side of port A of main body (only for single solenoid valves) In standard version the solenoid is mounted at side of port B For sensor position, see sect 16
- **5.2 option /D** = Internal drain (standard configuration is external drain)
- **5.3 option /E** = External pilot pressure (standard configuration is internal pilot pressure)
- **5.4 option /R** = Pilot pressure generator (4 bar on port P not for DPH*-1)

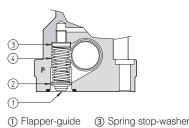

The device /R generates an additional pressure drop, in order to ensure the minimum pilot pressure, for correct operation of the valves with internal pilot and fitted with spools type 0, 0/1, 4, 4/8, 5, 58, 09, 90, 94, 49.

The device /R has to be fitted when the pressure drop in the valve, verified on flow versus pressure diagrams, is lower than the minimum pilot pressure value.

WARNING: the manual operation is not permitted for safety valves, than the valve is provided with solenoid blind rings to prevent the access to the manual override. The manual override protected by rubber cup (option /WP) is not available

WARNING: the inobservance of following prescriptions invalidates the certification and may represent a risk for personnel injury Safety valves must be installed and commissioned only by qualified personnel

Safety valves must not be disassembled

The inductive position switch FV can be adjusted only by the valve's manufacturer or Atos authorized service centers Valve's components cannot be interchanged

The valves must operate without switching shocks and spool vibrations

DEVICES FOR MAIN SPOOL SWITCHING CONTROL

Following options are suggested to reduce the hydraulic shocks at the valve operation

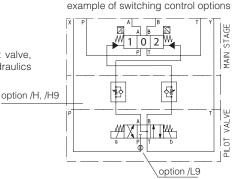

6.1 option /H = Adjustable chokes (meter-out to the pilot chambers of the main valve)

6.2 option /H9 = Adjustable chokes (meter-in to the pilot chambers of the main valve)

6.3 option /L9 = Only for DP-2 and DP-4: plug with calibrated restictor in P port of pilot valve, suggested in case of pilot pressure higher than 210 bar or to limit the hydraulics shocks caused by the fast main spool switching

Plug code:

- (1) Coil can be supplied also with 60 Hz of voltage frequency: in this case the performances are reduced by 10÷15% and the power consumption is 55 VA (DPHI) and 58 VA (DPHE)
- (2) Average values based on tests performed at nominal hydraulic condition and ambient/coil temperature of 20°C.
- (3) When solenoid is energized, the inrush current is approx 3 times the holding current. Inrush current values correspond to a power consumption of about 150 VA.
- (4) Only for DPHI (5) Only for DPHE

15 PLUGS LOCATION FOR PILOT/DRAIN CHANNELS

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below. To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270.

Standard valves configuration provides internal pilot and external drain
